SENTINELLE

DESCRIPTION

Sentinelle is a communication gateway between regulator networks and desktop computer Ethernet networks

In addition, it provides:
- The collection of all the settings and data from the connected regulators.
- The archival of the data locally on an SD card (without a connected computer)
- As an option: Alarm management by sending text messages
- RS485 link between regulators and sentinelle.

MONITORING SOFTWARE **SPECIFICATIONS**

The 4G Monitoring Software (climate and irrigation) provides:
- A real time overview of the installation.
- Customisation available for each site.
- The display and modification of the settings for the connected regulators.
- The real time viewing of the measurements from the different sensors, the regulation statuses, etc. in summary or table format…
- The use of the data recorded by Sentinelle (measurements, events) in the form of graphs, chronograms or tables.
- The creation and use of windows to display and update the most commonly used settings.
- Backups and restores of settings.
- Copying parameters.
- Multi-user management.
- As an option: alarm system settings.
- The software can be installed on several computers.
